

Serafin O. Gargantiel III

Chicago, IL | gargantielserafin@gmail.com | iamserafinnn.github.io | linkedin.com/in/serafingargantieliii

EDUCATION

University of Illinois at Chicago (UIC) / Chicago, IL Aug 2022 – May 2026
B.S. in Computer Science, Software Engineering Concentration | GPA: 3.35/4.00 | Dean's List (Spring/Fall 2023)
Relevant Coursework: Algorithms, Concurrent Programming, Memory Management, Data Structures, Database Systems

TECHNICAL SKILLS

Languages: C++, Python, SQL, Java, C, HTML/CSS
Frameworks & Libraries: React (front-end), Three.js, FastAPI, FAISS
Tools & Platforms: Git/GitHub, VS Code, Linux CLI, PostgreSQL, Jupyter Notebook, Android Studio, IntelliJ IDEA, Tableau
Methodologies: Agile, Scrum, Sprint Planning

EXPERIENCE

- Open Source Contributor - HertzBeat Site Refactoring** / Remote June 2026 - Present
- Debugged and resolved a UI/UX regression in Apache HertzBeat's production documentation web application, iterating through code review feedback from maintainers to merge the fix
 - Refactored blog components with React swizzling overriding default theming and following project conventions
 - Improved responsive layout behavior by restructuring blog components within the existing React codebase to render correctly across screen sizes
- CodePath - Applied AI Engineering & Intermediate Cybersecurity** / Remote Feb 2026 – Present
- Merged an open-source pull request to Apache Burr adding UI server documentation, successfully resolving a high-priority gap flagged by production maintainers in a React/Docusaurus codebase
 - Detected phishing email campaigns by analyzing SMTP traffic across thousands of packets in Wireshark pcap captures
 - Practiced incident response in Splunk auditing brute-force attempts, unauthorized access, and indicators of compromise
- Global Career Accelerator - Data Analytics & Wrangling** / Remote Aug 2024 – Nov 2024
- Built interactive data visualizations for Grammy.com and Intel Sustainability using Tableau, Python (Pandas, Plotly), and SQL to communicate insights to stakeholders
 - Earned SQL Specialist and Python Specialist certifications
 - Collaborated across cross-cultural teams on hands-on data challenges using Jupyter Notebook and relational databases

PROJECTS

- EpicCode - Amazon Product Reviews Semantic Search** / FAISS, PostgreSQL, FastAPI, React, Python
- Engineered an AI-powered semantic search engine prototype over 800K+ Amazon reviews using FAISS vector indexing and PostgreSQL, reducing query latency ~35%
 - Rapidly prototyped a full-stack AI search interface by connecting a React/Vite UI with a FastAPI server deployed on Railway and GitHub Pages
 - Expanded a 3-person, 4-month team project by independently designing and implementing a production-ready React frontend
- Android - AIDL Bound Service System** / Java, IPC, AIDL
- Independently built a cross-process Android application where FunClient requests and renders media (images/audio) served by FunCenter via AIDL bound service interfaces
 - Implemented multithreaded Java services to handle concurrent media requests between decoupled client and server-side request handling over IPC
 - Designed a service-oriented architecture with strict interface contracts, enabling independent client/server communication without shared memory
- WildRealms - Immersive Biome 3D Simulator** / React, Three.js, JavaScript
- Developed an interactive 3D wildlife simulator by building real-time WebGL scenes with React and Three.js with dynamic lighting, camera control, and 3D model integration for immersive navigation
 - Solely built the desert and tundra biomes, integrating 3D environments with interactive animal placement and player discovery mechanics across both scenes
 - Developed across structured sprint cycles with backlog management, coordinating deliverables across a 4-person team
